Product Branding

## Whats the benefit of product branding?

Brand exposure, identification, and the prevention of lost or stolen goods. Sending out your goods within branded containers or pallets provides a strong opportunity for additional advertising and brand exposure. You can also add details like a phone number and a web address. This also helps to ensure your goods aren't lost or stolen as they are clearly marked. In terms of identification, you can use printing to add things like sequential numbering or colour coding to your products to aid in picking and general warehouse operations.

## What can we offer?

We can print your **logo** on any plastic product with a large enough surface area meaning it works with the majority of the Exporta range.

We can also print,

- **Sequential Numbering**
- **Barcodes**
- **QR Codes**

## Artwork Setup

To print effectively we need a high quality logo from you in a JPEG, PNG or PDF format. Our team will then set this up on the printing system for you.

## Logo Colour

As standard, we offer one colour printing. Please enquire for a multi-colour print.

## Pricing

There is a one off, initial set up cost.

After this we charge a small fee per print. Contact our team for a price.
